

Company Profile

Leading you to the next generation

Actiphy, Inc.

We will continue to challenge ourselves to improve and develop innovative software solutions around our ideal of continual data protection and reliable system recovery.

Actiphy, Inc. is a publisher of backup, disaster recovery, and virtualization software essential in providing a foundation for business continuity through data protection and security.

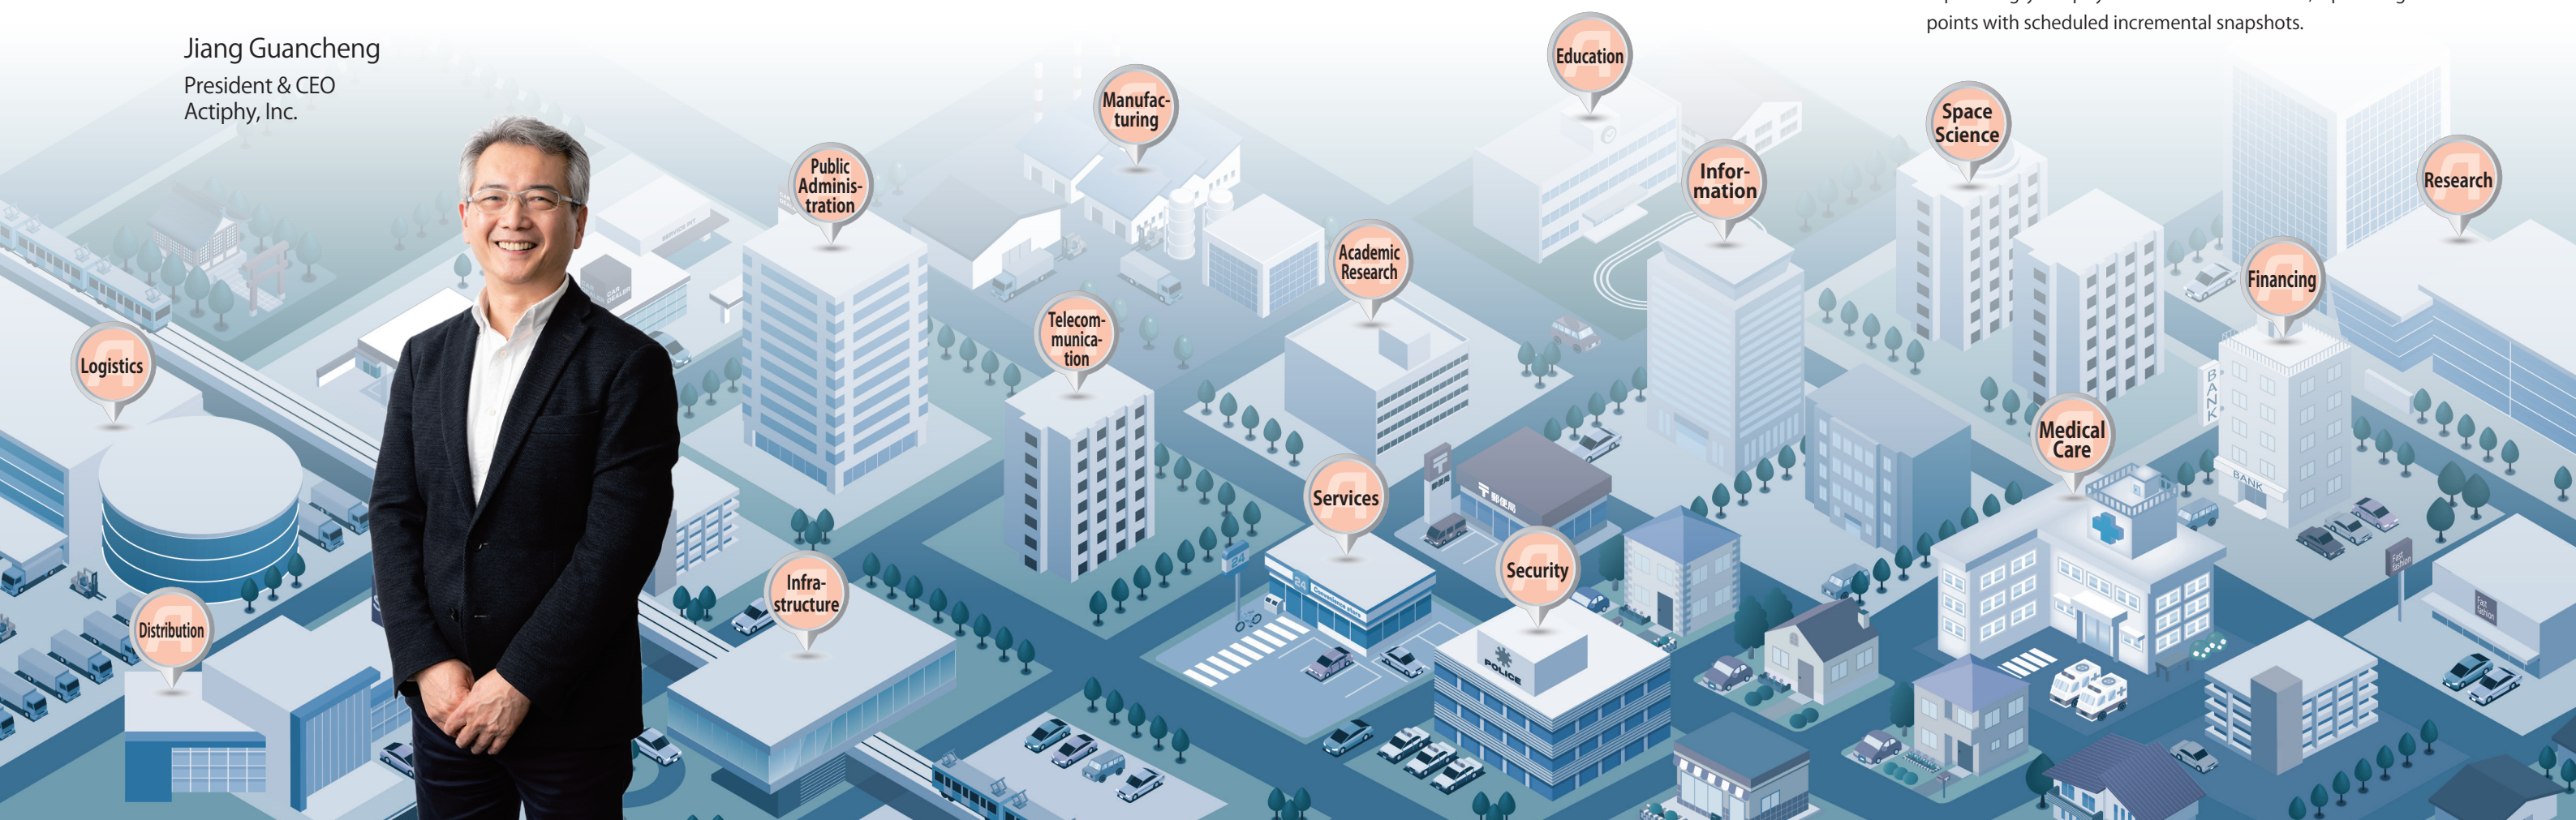

Our company was established in 1996 with the vision of adapting and introducing data protection and utility software solutions from international ISVs to the Japanese market. Realizing that image-based backups are more robust, reliable, and efficient than conventional backup methods, we developed our flagship backup and disaster recovery product ActiImage Protector™.

Digital information has become ubiquitous and abundant. Data is incorporated in both the professional and personal aspects of our lives. However, computer systems still run the risk of serious data loss from natural disasters, hardware failure, or ransomware attacks. We feel that now more than ever it's absolutely crucial for your data to be protected.

The ActiImage Protector™ suite of products have achieved much success in the Japanese market, and now we at Actiphy, are committed to expanding the distribution and sale of our products to the North American, European, and Asia / Pacific markets.

By listening to our users and partners we will continue to challenge ourselves to improve and develop innovative software solutions around our ideal of continual data protection and reliable system recovery.

Jiang Guancheng
President & CEO
Actiphy, Inc.

Main Businesses

Computer software development, sales, marketing, technical support, consulting

Actiphy's Global Business Expansion

IT Solution using Actiphy products

Backup / Restore

System Protection Safeguard against ransomware Bootability Check

In the event of business suspension due to unexpected system down or ransomware attack, the most effective measure for addressing the problem is the full-state recovery from backup. Our solution makes it possible to instantly restore your backups including the system and data in full state, when disaster strikes.

Disaster Recovery

Off-site Replication Disaster Control Measure BCP

When a large-scale disaster hits, backup data, if located in the same site or area, are exposed to the risk of data loss. Avoiding such situation, backups of your valuable data will be transferred to a remote site and kept safe.

Reduce downtime

Virtual Standby Replica

In the event of a server system failure, you need to quickly bring the server back in operation. Actiphy's Virtual Standby Replica technology provides an affordable standby availability solution replicating your physical / virtual machines, up-dating boot points with scheduled incremental snapshots.
